## VCM-Series Product Data Sheet

Model Name: **VCM-CF360 Digital Voice Module**..... Rev. E2

### Introduction

**VCM-CF360** is a digital voice module .It directly plays back 8/16-bits mono PCM sound files digitized at 8, 11, 16, 22.05, 24, 32, 44.1 KHz. Sound files are programmed and stored in Compact Flash Card for instant, random access. There is no restriction on the length of each sound, as long as the total length of all sounds combined fit to the CF Card.

The board is designed to be a standalone device, powered by a single voltage supply. Sound playback can be triggered by a number of devices such as push buttons, motion sensors and dry contact closures. The built-in power amplifier can deliver up to 3.5W into a speaker, with a volume control tuner.

The board can be configured to operate in different modes. The configuration data is stored in CF Card memory along with sound bytes. On power up the board will configure itself automatically. There is no need to set switches manually.

There are many Playback Modes: Direct Single, Direct Single of Cycle, Binary, Parallel and Serial modes. All of input modes are edit via CF-Linker Software Tool.
